FOREWORD

Without the original *The Modern Reader's Japanese-English Character Dictionary*, there, of course, could have been no *New Nelson*. Besides being a trail-blazer, Nelson's dictionary also incorporated the Radical Priority System, which gave a hierarchically ordered algorithm for finding characters, but essentially retained the traditional radical system. Given its proven usefulness, we were reluctant to abandon the Radical Priority System, but we have replaced it with the **Universal Radical Index**, which cross-indexes each entry by every radical or radical-like element in it. The advantages of the unprecedented level of cross-referencing and the ease of use offered by the URI, as well as the transfer of skills and knowledge to the use of traditional dictionaries offered by the reversion to the traditional radical system, more than compensate for the loss of the Radical Priority System. In addition, the incorporation of the URI has allowed us to eliminate crosslisting of the same character within the body of the dictionary.

Under the philosophy that one should be able to check on any character generated by one's wordprocessor, we have incorporated all of the JIS level 1 and 2 characters (JIS X 0208). This has meant an extension of the numbered entries from 5446 characters to 7107. One of the unique features of the original Nelson's dictionary was that it incorporated such a large number of numbered and unnumbered variant characters; we have tried to maintain this advantage. However, we have reduced the number somewhat by ignoring some predictable variations. These are primarily of two types. In the first case, the element 一 appears with the top stroke vertical as pictured or as horizontal (ㄟ). In the original Nelson's, both were listed as separate entries, often under different radicals, but we have listed only the common variant, usually with the vertical upper stroke. Also, the element 八 occurs both with the two strokes pointing out at the bottom and with the two strokes pointing in at the bottom. This variation occurs in many positions, but generally only the inward-pointing variation has been listed herein for Jōyō characters and the outward-pointing variation for traditional forms. Where a variation changes the appearance of the character significantly or changes the stroke-count, both forms of the character have been retained and given reference numbers.

The *on-kun* index has been expanded to include compounds that have readings not predictable from their component characters (e.g., 明日 *asu*, *ashita*, 海豚 *iruka*). The addition of the original *on-kun* index made the "reader's" dictionary a "writer's" dictionary as well, and we hope this expansion will prove to be useful to writers. No attempt has been made to indicate which of these compounds are in common use and which are comparatively rare, however.

All of the entries were examined and changes, additions, and deletions were suggested by the compound judges Haruko Minegishi Cook, Kakuko Shōji, Hisami Konishi Springer, and Nobuko Miyama Ochner. The Universal Radical Index was developed by several people with Stewart A. Curry, who also entered the index into the database, doing the majority of the index development. Jim K. Yoshioka, John D. Creamer, Mariko Yamashita Shawback, Dianne S. J. Lim, Blaine Erickson, and Zachry A. Matheson worked on text inputting, editing, and proofreading. Other people who contributed in significant ways on the project include Michael S. Wenzel, Dina Rudolph Yoshimi, Jeffrey J. Hayden, Arthur Thornhill, J. Marshall Unger, and Timothy Vance. The support and advice of editors Patrick J. Mahany and Tatsuya Tamura, and operations manager Richard S.

TYPOGRAPHICAL EXPLANATIONS

THE PAGE IN GENERAL

N.B. The first five items below pertain to the first main-character entry on a left-hand page and to the last on a right-hand page.

1. The topmost boldface numeral in the upper, outer corner shows the traditional number of the radical under which the main character entries on the page are classified.

2. The vertical string of radicals in the outer margin shows all the radicals containing the relevant number of strokes, plus their more important variants.

3. The heavy brackets enclose the radical (and important variants) under which the main character entries on the page are classified. As the reader spins the pages, the brackets will seem to run up and down the string of radicals, providing a rapid visual aid to locating the relevant radical.

4. The boldface number at the head of a radical string shows the number of strokes in the radicals in the string.

5. The tiny numeral outside the radical (and variants) enclosed by the brackets show the number of strokes in the non-radical part of the main character entries on the page.

6. Boldface numbers in the lower, outer corner show the inclusive numbers of the character entries on the page.

7. Numerals centered at the bottom of each page are page numbers.

8. A column-wide divider consisting of a boldface numeral flanked by horizontal lines shows the beginning of a group of characters each having the indicated number of strokes in its non-radical part.

9. A page-wide divider consisting of a radical and its traditional number flanked by heavy horizontal lines shows the beginning of a new radical section. Shown immediately below the divider are the variants of the radical, its names in Japanese and English, and other pertinent information. Each radical is also given an English “nickname” in an effort to standardize the English nomenclature of the radicals.

THE ENTRIES

10. The large boldface character at the left of a column indicates a main entry character.

11. Three numbers separated by horizontal lines immediately follow each main entry. The top number is the character’s Nelson number and is assigned sequentially through the dictionary to every main entry. This number is used in all cross-references. The middle number, preceded by a J, is the character’s Japan

Typographical Explanations

Industrial Standard code number. “J-X” indicates that the character is not found in the JIS character set. The bottom number, preceded by an M, is the number assigned to the character in Morohashi’s *Dai Kanwa Jiten*. “M-X” means that the character is not found in Morohashi.

12. A capital A immediately to the left of a main character entry indicates that the character is one of the 1006 characters designated by the Ministry of Education to be learned in the six years of elementary school (See Appendix 13). A capital B indicates that the character is one of the other 939 characters in the Jōyō Kanji List. If no small capital letter precedes a main entry character, it is to be understood that the character, while outside the 1,945 list, is still sufficiently common in modern literature to be important in a wide mastery of Japanese.

13. Other large boldface characters to the right of a main entry show alternative forms of the character. The Nelson, JIS, and Morohashi numbers of these variants are also given.

14. Readings of a character in small capital letters show the *on* or Sino-Japanese readings. These are defined only if they have distinctive meanings; otherwise they partake of the English meanings which follow other readings of the character. (Note that many *on* readings have gone out of use. As a rule, only those *on* that have independent use or appear in compounds in this dictionary are listed. For a complete listing of all the *on* readings of a character, see the Morohashi dictionary. See our character 6997 for an example of the great number of *on* readings that a character may have.)

15. Readings of a character in italics show the *kun* or native Japanese readings. The Hepburn system of romanization is employed in this dictionary. In general, the order of listing of the *kun* readings is, first, verbs, then other parts of speech, and finally prefixes and suffixes. The punctuation of the *on* and *kun* readings provides information about their uses and meanings as shown in the following examples: (a) “ON meaning. *kun* meaning.” or “ON meaning. ON meaning. *kun* meaning. *kun* meaning.” shows *on* and *kun* readings with separate meanings. (b) “ON. *kun* meaning.” shows that the *on* reading is not used alone, but partakes of the *kun* meaning in compounds. (c) “ON. ON meaning. *kun* meaning.” shows that the first *on* is not used alone, but partakes of the meanings of the other readings in compounds. (d) “ON *kun* meaning.” or “ON, ON *kun* meaning.” shows that the *on* may be used alone and share the meaning of the *kun* readings.

16. Syllables of a reading enclosed in parentheses show syllables comprising the *okurigana*, i.e., the inflected part of the word written in the kana syllabary. We follow recent Ministry of Education recommendations, but there is considerable variation in actual use. The auxiliary verbs *suru*, *nasu*, and *naru* and particles (*na*, *no*, *ni*, *de*, etc.) are not parts of the preceding words and are therefore not enclosed in parentheses; they should, of course, be written in the kana syllabary in a text.

17. The characters 国字 (*kokuji*) following a main entry indicate that the character is made in Japan and not inherited from China.

18. A radical enclosed in heavy brackets at the end of a main entry shows the character’s traditional radical, which may differ from the radical under which we

have classified it in several cases. These cases are described in the material described in Paragraph 9 above.

THE COMPOUNDS

19. Small characters at the left of a column following a main entry are the compound entries and are followed by their readings in italics. No distinction is made between *on* and *kun* readings in compound entries. Parentheses are used to indicate *okurigana* as described in Paragraph 16 above. Note that in listing compounds the main-entry character is not repeated since it is the first member of every compound.

20. Superscript numerals immediately to the left of a list of compounds show the full stroke count of the second character of the compound (the main-character entry being counted as the first character). A new numeral appears whenever the stroke count changes.

THE CROSS-REFERENCES

The two types of cross-references used in the text are illustrated below.

为 ³⁵<sub>J-X
M-X</sub> Nonstandard for 第 4272.

为 is not on the Jōyō list and is not one of the traditional variants listed in standard character dictionaries, but is quite widely used for 第 4272.

區 ⁵⁹³<sub>J523f
M2691</sub> See 区 585.

The information concerning the character 區 is to be found under its Jōyō equivalent 区 585.
